

### 4.3 Mixed and Entire Radicals

Perfect Squares:

$2^2 =$	<u>4</u>
$3^2 =$	<u>9</u>
$4^2 =$	<u>16</u>
$5^2 =$	<u>25</u>
$6^2 =$	<u>36</u>
$7^2 =$	<u>49</u>
$8^2 =$	<u>64</u>
$9^2 =$	<u>81</u>
$10^2 =$	<u>100</u>
$11^2 =$	<u>121</u>
$12^2 =$	<u>144</u>

Perfect Cubes:

$2^3 =$	<u>8</u>
$3^3 =$	<u>27</u>
$4^3 =$	<u>64</u>
$5^3 =$	<u>125</u>
$6^3 =$	<u>216</u>

**Entire Radical:** A radical with a coefficient of 1. All the numbers are under the root symbol (except for the index).

ex:  $\sqrt{140}$  or  $\sqrt[3]{15}$

**Mixed Radical:** When the coefficient is anything other than 1.

ex:  $3\sqrt{12}$  or  $2\sqrt[4]{99}$

**Example 1:** Express a whole radical as a mixed radical (**simplify** the radical)

- Steps: 1) Find the largest perfect square/cube that is a factor of the radicand.

$$\sqrt{(\text{perfect square/cube}) \cdot (\text{another factor})}$$

- 2) Rewrite the radical as the product of two radicals.

$$\left(\sqrt{\text{perfect square or cube}}\right) \cdot \left(\sqrt{\text{another factor}}\right)$$

- 3) Simplify your answer by finding the square/cube root of the perfect square/cube.

$$\text{coefficient} \cdot \sqrt{\text{another factor}}$$

$$\begin{aligned}
 \text{a) } \sqrt{12} & \quad \text{perfect square} \\
 &= \sqrt{4 \cdot 3} \\
 &= \sqrt{4} \cdot \sqrt{3} \\
 &= 2\sqrt{3}
 \end{aligned}$$

$$\begin{aligned}
 \text{b) } \sqrt{45} \\
 &= \sqrt{9 \cdot 5} \\
 &= \sqrt{9} \cdot \sqrt{5} \\
 &= 3\sqrt{5}
 \end{aligned}$$

$$\begin{aligned}
 \text{c) } \sqrt{72} & \quad \text{largest perfect square} \\
 &= \sqrt{36 \cdot 2} \\
 &= \sqrt{36} \cdot \sqrt{2} \\
 &= 6\sqrt{2}
 \end{aligned}$$

$$\begin{aligned}
 \text{d) } \sqrt{80} \\
 &= \sqrt{16 \cdot 5} \\
 &= \sqrt{16} \cdot \sqrt{5} \\
 &= 4\sqrt{5}
 \end{aligned}$$

$$\begin{aligned}
 \text{e) } \sqrt[3]{24} & \quad \text{perfect cube} \\
 &= \sqrt[3]{8 \cdot 3} \\
 &= \sqrt[3]{8} \cdot \sqrt[3]{3} \\
 &= 2\sqrt[3]{3}
 \end{aligned}$$

$$\begin{aligned}
 \text{c) } \sqrt[3]{144} \\
 &= \sqrt[3]{8 \cdot 18} \\
 &= \sqrt[3]{8} \cdot \sqrt[3]{18} \\
 &= 2\sqrt[3]{18}
 \end{aligned}$$

**Example 2 :** Express a mixed radical as a whole radical

- Steps :
- 1) Square or cube the coefficient out in front of the radical sign (depends on the index)
  - 2) Then, move it under the radical and multiply it by the radicand

$$\begin{aligned}
 \text{a) } 5\sqrt{3} \\
 &= \sqrt{5^2 \cdot 3} \\
 &= \sqrt{25 \cdot 3} \\
 &= \sqrt{75}
 \end{aligned}$$

$$\begin{aligned}
 \text{b) } 2\sqrt{7} \\
 &= \sqrt{2^2 \cdot 7} \\
 &= \sqrt{4 \cdot 7} \\
 &= \sqrt{28}
 \end{aligned}$$

$$\begin{aligned}
 \text{c) } 3\sqrt[3]{4} & \quad \star \\
 &= \sqrt[3]{3^3 \cdot 4} \\
 &= \sqrt[3]{27 \cdot 4} \\
 &= \sqrt[3]{108}
 \end{aligned}$$

$$\begin{aligned}
 \text{d) } 2\sqrt{3} \\
 &= \sqrt{2^2 \cdot 3} \\
 &= \sqrt{4 \cdot 3} \\
 &= \sqrt{12}
 \end{aligned}$$

$$\begin{aligned}
 \text{e) } 2\sqrt[3]{5} \\
 &= \sqrt[3]{2^3 \cdot 5} \\
 &= \sqrt[3]{8 \cdot 5} \\
 &= \sqrt[3]{40}
 \end{aligned}$$

$$\begin{aligned}
 \text{c) } 2\sqrt[4]{3} \\
 &= \sqrt[4]{2^4 \cdot 3} \\
 &= \sqrt[4]{16 \cdot 3} \\
 &= \sqrt[4]{48}
 \end{aligned}$$
